

Malmö, Sweden  
7<sup>th</sup> of October 2019

Dear valued customer,

We hereby inform you that we are implementing a change to  
**Wieslab® Complement System MBL Pathway kit**

---

<b>Products affected:</b>	Wieslab® Complement System MBL pathway – IVD & RUO kits <b>COMPLMP320, COMPLMP320RUO</b>
<b>Effective Date:</b>	The effective date of this change is kits manufactured as of October 2019.
<b>Description of change:</b>	The affected products will no longer have green color-coded microtiter plates. All products produced after October 2019 will have colorless microtiter plates.
<b>Reason for change:</b>	Our supplier of microtiter plates has changed their manufacturing process and can no longer supply us with green plates.
<b>Customer impact:</b>	There is no change to the product outside of a physical change in the plate appearance - the function and performance of the product is unchanged.

Please note that the Instructions for Use (IFU) will be updated with information to reflect the change and an alert note will be put onto the kit box with the information "Please note that the microtiter plate is colorless".

We sincerely hope this change will have minimal impact for you and apologize for any inconvenience this change may cause.

Yours sincerely,

Christine Mellborg  
Product Manager
